

AstroScope™ Night Vision

for High Definition Camcorders

Convert Your High-End Video Camcorder into a High Performance Night Vision System with AstroScope

Electrophysics AstroScope is a high-performance night vision module that transforms dark scenes (below 10-4 lux) into bright, high-resolution imagery. The AstroScope Night Vision Camcorder assemblies are specifically designed for many fixed lens camcorders to produce high-quality video under very demanding conditions.

The heart of the AstroScope system is the Gen III Central Intensifier Unit (CIU). AstroScope's modular design enables you to expand your capabilities by allowing you to easily transfer the image intensifier to

other platforms including Canon® and Nikon® SLR cameras, removable-lens camcorders like the Canon® XL2, and a portable handheld scope.

Additionally, Electrophysics now offers the world's first HD night vision camera systems. Specifically designed for popular Canon®, Panasonic® and Sony® high-definition prosumer camcorder models, they produce high-quality, high resolution night-time video. When you need to get the shot, AstroScope delivers.

AstroScope™ Night Vision

for High Definition Video

A design that delivers optimum performance in every configuration.

Unlike pockscope-based night vision setups, AstroScope is specifically designed for image capture applications. Only AstroScope enables you to use high-performance lenses to shoot full-frame images at distances beyond 1000 meters!

AstroScope's modular design enables you to easily transfer the image intensifier to other camera platforms including Canon® SLR, Nikon® SLR, Canon® XL2 and fixed lens camcorders.

- ◆ Use high-performance objective lenses
- ◆ No vignetting on most platforms
- ◆ Installs in less than 30 seconds

Your AstroScope can be reconfigured into these configurations with the addition of the appropriate adapters
